Canadian Manuscript Report of Fisheries and Aquatic Sciences

Manuscript reports contain scientific and technical information that contributes to existing knowledge but which deals with national or regional problems. Distribution is restricted to institutions or individuals located in particular regions of Canada. However, no restriction is placed on subject matter, and the series reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Manuscript reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report is abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–900 in this series were issued as Manuscript Reports (Biological Series) of the Biological Board of Canada, and subsequent to 1937 when the name of the Board was changed by Act of Parliament, as Manuscript Reports (Biological Series) of the Fisheries Research Board of Canada. Numbers 901–1425 were issued as Manuscript Reports of the Fisheries Research Board of Canada. Numbers 1426–1550 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Manuscript Reports. The current series name was changed with report number 1551.

Manuscript reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport manuscrit canadien des sciences halieutiques et aquatiques

Les rapports manuscrits contiennent des renseignements scientifiques et techniques qui constituent une contribution aux connaissances actuelles, mais qui traitent de problèmes nationaux ou régionaux. La distribution en est limitée aux organismes et aux personnes de régions particulières du Canada. Il n'y a aucune restriction quant au sujet; de fait, la série reflète la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports manuscrits peuvent être cités comme des publications complètes. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports manuscrits sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 900 de cette série ont été publiés à titre de manuscrits (série biologique) de l'Office de biologie du Canada, et après le changement de la désignation de cet organisme par décret du Parlement, en 1937, ont été classés comme manuscrits (série biologique) de l'Office des recherches sur les pêcheries du Canada. Les numéros 901 à 1425 ont été publiés à titre de rapports manuscrits de l'Office des recherches sur les pêcheries du Canada. Les numéros 1426 à 1550 sont parus à titre de rapports manuscrits du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 1551.

Les rapports manuscrits sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Haist, V. and L. Rosenfeld. 1988. Definitions and Codings of Localities, Sections, and Assessment Regions for British Columbia Herring Data. Can. MS Rep. Fish. Aquat. Sci. 1994: 123 p.

Current listings of localities used for coding British Columbia herring data are presented. Herring sections and assessment regions, the geographic units used for data analysis and annual stock assessments, are defined.

Key words: Clupea harengus pallasi, geographic units, codings

RÉSUMÉ

Haist, V. and L. Rosenfeld. 1988. Definitions and Codings of Localities, Sections, and Assessment Regions for British Columbia Herring Data. Can. MS Rep. Fish. Aquat. Sci. 1994: 123 p.

Nous présentons la liste courante des localités utilisée pour le codage des données de la Colombie-Britannique sur le hareng. Les sections et les régions d'évaluation, les unités géographiques utilisées pour l'analyse des données et les évaluations annuelles du stocks sont définies.

Mots-clés: Clupea harengus pallasi, unités géographiques, codage

INTRODUCTION

British Columbia herring data (catch, spawn, and biological samples), have been coded geographically since 1950 using a location system unique to herring management (Hourston and Hamer 1979; Isaacson and Hourston 1972). This system is based on geographically specific locality codes which may be aggregated to form larger geographic groupings. Locality codes used prior to 1970 (Isaacson and Hourston 1972) differed from those used after 1970 (Hourston and Hamer 1979), in that they were unique to a statistical area rather than being unique coastwide. The pre-1970 codes have been converted to the new system to permit the generation of consistent catch, spawn, and biological sample data bases for stock assessment analyses.

This manuscript describes all current revisions to the system for aggregating localities, and updates the locality codes to June, 1988.

DEFINITIONS AND CODINGS

Each locality identified as a B.C. herring spawning or fishing site has been given a unique four digit code. Since catch locations prior to 1970 were often reported only by statistical area, a new code for converting location codes from the original system became necessary. Locality codes in the 2000 series are reserved for unknown locations within a statistical area or section.

Locality codes and names are listed in numerical order (Table 2), and alphabetical order (Table 3). Additionally, "catch" location codes (sorted alphabetically by statistical area) are presented in Table 5. Catch location codes are similiar to regular location codes, except they are preceeded by a "1", and have a hyphen after the second digit. They are used by the Program Planning and Economics Branch of DFO. Locations are added as new spawning or fishing sites are identified.

Sections are the smallest level of geographic aggregation used for analyzing B.C. herring data. Section boundaries are defined to group adjacent herring spawning grounds into clusters. However, where these clusters cross statistical area boundaries, separate sections are defined within each statistical area to facilitate aggregation of data by area. The sections described in this report (Table 4), are redefined from Hourston and Hamer (1979). The revisions take into account recent changes in herring spawning distributions and changes to statistical area boundaries. In addition, sections were defined to encompass entire management subareas (Pacific Fishery Management Area Regulations, ammended February, 1985), wherever reasonable. Section boundaries are shown in Figures 1-6. Table 1 shows the relationship between statistical areas, sections, and management subareas.

Assessment regions have been defined to group sections containing the spawning grounds of the major migratory herring stocks which are also the major roe-herring fishing grounds. There are seven assessment regions (Figs. 7-8):

Assessment Region	Sections
Queen Charlotte Islands	21, 24, 25
Prince Rupert District	31-33, 41-43, 51-53
Central Coast	67, 71-78, 85
Strait of Georgia - North	132, 135, 141-143, 151, 152, 161-165, 171, 172
Strait of Georgia - South	173, 181, 182, 191-193
W. Coast Vancouver Island - South	231-233, 241-244
W. Coast Vancouver Island - North	251-253, 261-263, 271-274

Stock assessments and forecasts are conducted annually for these seven assessment regions.

COMPUTER DATA ACCESS

The location coding system is maintained on-line on the VAX785 at the Pacific Biological Station. The data is in a direct access file, "LOC1.DAT", which has "readonly" privileges and fixed length thirty-six byte records. The records contain the following information:

Record	Data Type	Information
Record # 1	I*2	Number of records in file
	Character*18	Revision date
Record #2 - end	I*2	Location code
	Character*1	"*" if spawn location, blank if not
	I*2	Section code
	Character*27	Location name
	Character*4	Statistical area

ACKNOWLEDGMENTS

We thank L. Fitzpatrick for preparing the figures and checking locations with revised boundaries. C. W. Haegele provided useful suggestions for section boundaries and names.
